Your email address will not be published. Required fields are marked * Comment Name * Email * Note: Code will be sent to your email address. This is to prevent SPAM and to make sure that you are the owner of the website. Please read our Privacy Policy for more details. Another year has passed and we are so proud to have been able to work with amazing women at LegalFaces.io to launch a

new update of our website and meet the needs of our users. The future is coming up and so we started working on the next version of our website to make sure that our users will continue to enjoy their experience. The first step that we took was to bring back our best-loved features: My Bookmarks and My Favorites. Now it's not only women who can navigate our site easily and quickly using them. LegalFaces.io is working hard to make sure that women, like lawyers, have a place to become successful. We will always do our best to address the needs of women, to allow them to reach their goals and achieve success in their lives. The only way we can do this is by listening to our users and working with them, and we are proud of what we have achieved together this year.

UPDATE: We're happy to announce that LegalFaces is now accepting Lite (free) accounts with all features, you can read more about it here. This should solve most of the issues that we're hearing about. The site will still be online for the few that don't want to switch to Lite.Q: Kohana: How to modify an array before send to view? \$this->request->send(array('params' => \$params, 'template_name' => 'contact', 'template_prefix' => 'application/modules/contacts',)); This is my code to send the contact form to a view and works fine. It looks like this in the browser: [CONTACTS] => Array ([Name] => Array (
